

TECHNOLOGY  MEET BUSINESS.

A large, semi-transparent background image of a woman with short dark hair, wearing a dark turtleneck sweater, sitting at a desk with a computer monitor and keyboard. She is looking towards the camera with a slight smile.

Portal Creation and Application Integration

Targeted portal technology delivers on the promise of self-serve computing and automated workflow.

Portal Creation and Application Integration

Today, companies are looking to capitalize on existing legacy investments and reuse current assets. Restructuring data into valuable and actionable information gives companies like yours a competitive advantage in the marketplace. By automating workflow and creating a self-serve collaborative work environment you can achieve greater operational efficiencies within and outside your organization.

Islands of valuable business information present a challenge to any enterprise. You need to access information, expose the data and add value by incorporating the information into a useable, consistent workflow. A central repository filled with rich real-time data accessible by your whole organization is just the beginning.

You have a vast amount of information to manage, not to mention multiple databases and numerous products and technologies to choose from. You need a company that's been there, made the right choices and executed IT strategy that's made measurable contributions to the bottom line. That company is ...Statera.

A solution you can live with

Today's portal technology offers more than a gateway to information. With Statera's expertise in portal deployment, we help you unite information, boost enterprise/staff productivity and integrate all your applications and data, all with an easy-to-use customizable interface. Bottom line—we create role-based computing with a self-serve process for a collaborative work environment.

WHY Create a Portal?

Statera's Portal services provide value:

- Access and leverage existing content, company-wide
- Build new and more efficient composite applications with legacy investments
- Consolidate multiple intranets into one management platform
- Improve application development efficiency
- Repurpose existing assets into Web services through a Service Oriented Architecture (SOA)

Statera's Portal Solution Suite—

Statera's Portal Solution Services offer several programs that facilitate a quick launch into the portal implementation process.

PORTAL READINESS SERVICE

More than ever, it is important to align business goals with the right technology to return value to your business. In an effort to determine the true value of a portal to your organization, you

Why Statera?

- Determining Business Value First
- Launch and learn implementation
- Proven portal creation experience
- Rapid ROI realization
- Proven vendor partnerships
- Objective and balanced technology recommendations
- Service Oriented Architecture (SOA) understanding

will want to develop a business case through research and documenting your projected return on investment (ROI).

Developing a business case will drive you to focus on your specific business challenges and what your ideas are for possible solutions.

PORTAL TECHNOLOGY SERVICE

Today there is an excess of out-of-the-box portal technologies promising rapid deployment at a lower cost. However, many of these technologies become inflexible point solutions, quickly losing business value as their architecture and feature set cannot provide more than simple content management. Statera provides comprehensive review and assessment of portal technologies ensuring selection of assets capable of solving short-term needs and providing long-term business value.

PORTAL PROOF OF CONCEPT SERVICE

Experimenting with portal technology allows you to experience its potential while gaining a better understanding of how it can add value to your organization. Statera will configure a pilot environment to enable document search and indexing capabilities. Along with your customized information categories

“By 2006, more than 80 percent of portal products will be sold by an APS or APS/SES combination... The remaining 20 percent will be split between SES vendors... and traditional portal products.”

The Portal Landscape - The Evolution of the Portal
Gartner Group

and version-controlled documents, this non-invasive solution gives you an experimental proof-of-concept environment in which to test your initiatives.

Statera's portal services are supported by expertise in the following segments:

Application Platform Suites (APS) provide integrated software infrastructure technologies for distributed architecture business applications. The APS typically provides an enterprise application server with support for component standards such as J2EE and .net; a portal server enabling contextual display of information to multiple audience profiles; integration features ranging from simple point-to-point interfaces through Web services provisioning.

Smart Enterprise Suites (SES) are a combination of portal, collaboration and content management integrated into a single platform, providing various combinations of the following feature sets:

- **Content management** – including document management and Web content management, extending to digital asset management and support for rich media
